

# Actioil A550 treatment

## Versatile, non-aggressive and durable

### 1 - Actions, results and characteristics

#### Actions

- Protects and optimizes fuel:
  - Lubricity
  - Cetane index
  - Oxidation stability
  - Keeping the cold
- Dissolves sludge and sediments
- Atomizes water particles
- Preserves the functioning of pumps and injectors
- Protects the tank from corrosion or erosion by depositing a protective film
- Inhibitor of bacteria, prevents the formation of bacteria
- Prevents clogging partly due to biofuels
- Prevents catalyst encrusting (engines Euro5 et Euro6)

#### Results

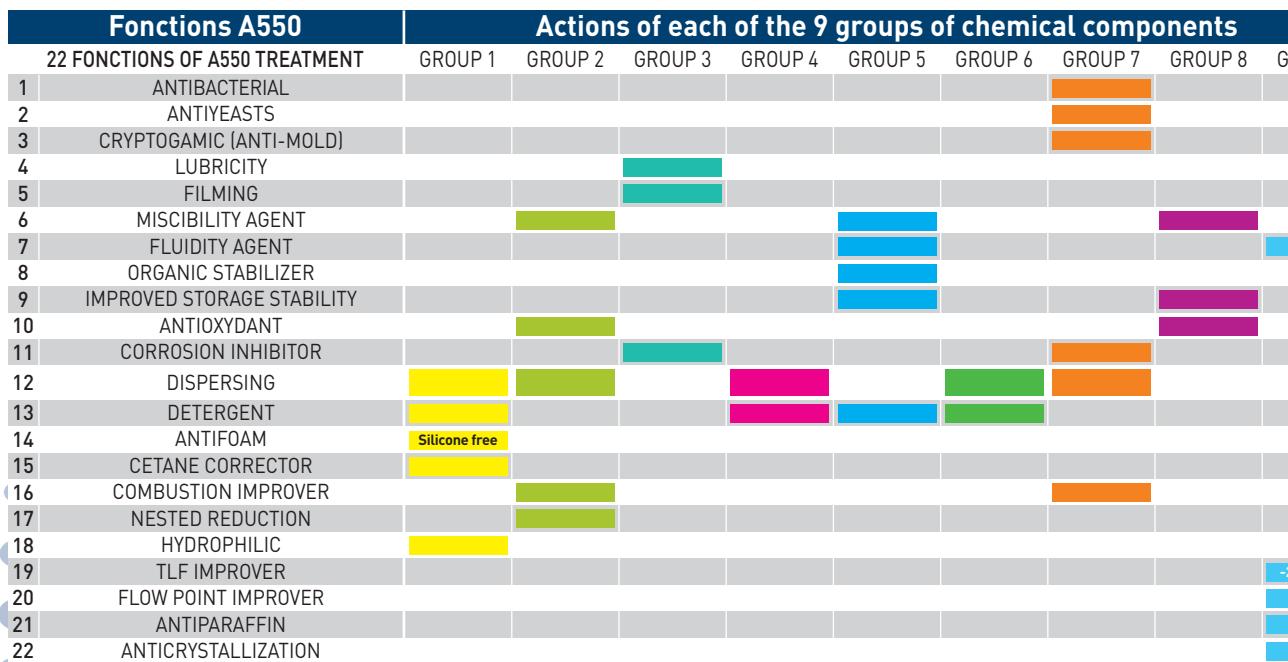

- Tanks without corrosion or erosion
- Clean fuel, regaining its initial performance
- Fuel life is extended
- Reduced polluting emissions
- Protected engines, restored fuel consumption and performance

#### Characteristics

- Totally soluble in diesel
- Compatible with Euro6 engines
- Suitable for all types of fuel tanks

### 2 - The detailed composition of the product

9 groups of chemical components to treat 22 problems

They trust us around the world and they  
are our partners

# A550

Diesel treatment, by Actioil

**PROTECTED ENGINES  
AND SATISFIED CUSTOMERS:  
OUR ASSETS, YOUR ASSETS**

- Extending the life of treated equipment
- Stabilization and remediation of diesel fuel
- Suppression of bacteria and corrosion risks
- Lower maintenance costs
- Up to 6% fuel economy

#### CERTIFICATIONS:

Actioil A550 complies with European standard REACH.  
Registered in France with the INRS n° 101423, and MEEDDAT n° 11410.  
Registered in Brazil with the ANP n° 638 and Brazilian Ministry of the Environment n° 003/2010

#### Scientific partnerships

Brazil: University of Porto Alegre and Institute of Technology of Petroleum Products of Rio de Janeiro

# Why treat diesel?

## 1 – The phenomenon of condensation inside the tanks

- Weather conditions generate variations in temperature
- Diesel fuel contains water in a soluble state
- Damp air gets inside the tanks
- High-pressure engines generate a return of hot fuel into the fuel tank

### Consequences:

- Condensation creation
- Development of micro-organisms (bacteria, fungi, yeast)
- Corrosion of metal tanks
- Erosion of resin or fiberglass tanks

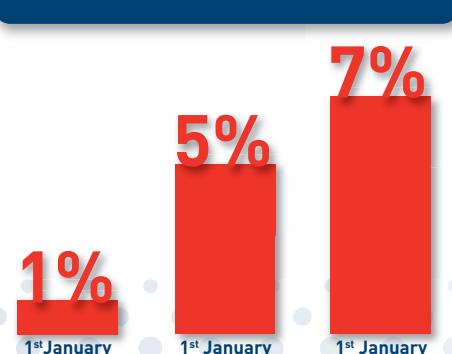

## 2 – The composition of diesel fuels

- Diesel can now contain biofuels (EMAG, etc.)
- Sludge and sediment may have mixed with diesel during storage
- Diesel contains less and less of Sulphur < 10 ppm in 2011 to 400 ppm in 1996

### Consequences:

- Fuel destabilization (oxidation)
- Bacterial overgrowth
- Lubrication problems
- Filter clogging

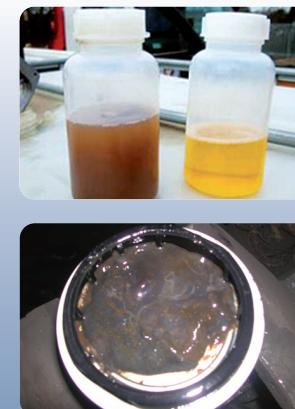

### Evolution of European regulations on the methyl ester content of fuels

### Examples of contamination and corrosion:

Proliferation of microorganisms

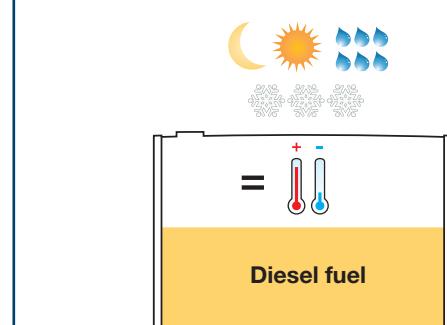

The properties of diesel fuel deteriorate and engine performance degrades

## 3 – Explanation in pictures

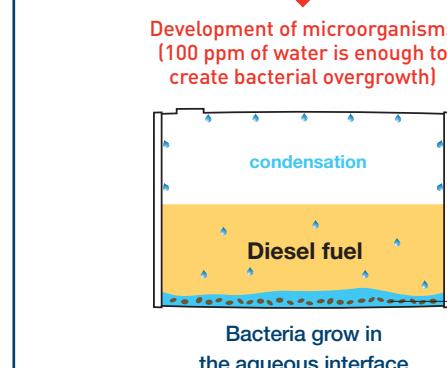

### Condensation phenomenon

Temperature differences due to climatic variations generate condensation from water:

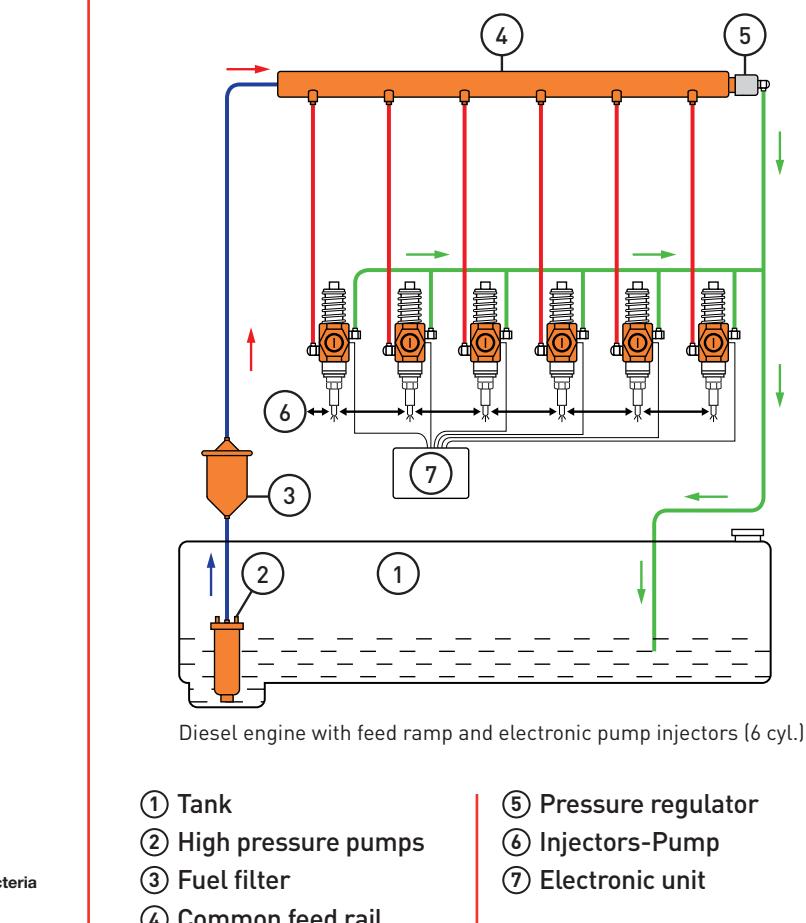

- Contained in the ambient air
- Dissolved in the diesel

Condensation turns into water that settles at the bottom of the tanks

The performance of high-pressure engines generates a return of hot fuel in the tanks.

Simple to use,  
maximum duration of action

## 1 – Summary of processing procedures

### General treatment

- Euro 1 – 2 – 3 – 4 – 5

1 L Actioil A550 for 100L of gasoil capacity to pour into the tank before filling.  
→ Protection 1 year, +/- 100 000 km or 500h working hours.

- Euro 6

0.5 L Actioil A550 for 100L of gasoil capacity to pour into the tank before filling.  
→ To renew twice a year, +/- 50 000 km or 250h working hours.

### Extreme Cold Treatment

Between 1L and 4L of Actioil A550 per 1000L of diesel to be poured into the tank before filling.

→ Protection against crystallization of gas oil T° up to -28°.

### Treatment and protection of storage tanks under 25 years

- General treatment

#### In case of polluted tank:

3 liters of Actioil A550 for 1000L of diesel to pour into the tank before filling.  
Wait 2 hours before use.  
After one year apply the procedure of preventive treatment..

- Preventive treatment

In case of a new installation, following a general treatment or following a mechanical cleaning:  
1 liter of Actioil A550 for 1000L of diesel to pour into the tank before filling.  
Wait 2 hours before use.  
The treatment must be renewed every year.

## 2 – Containers

- Jerrycan of 1L, 5L, 20L

- 200L barrel

- 1000L IBC TANK
